

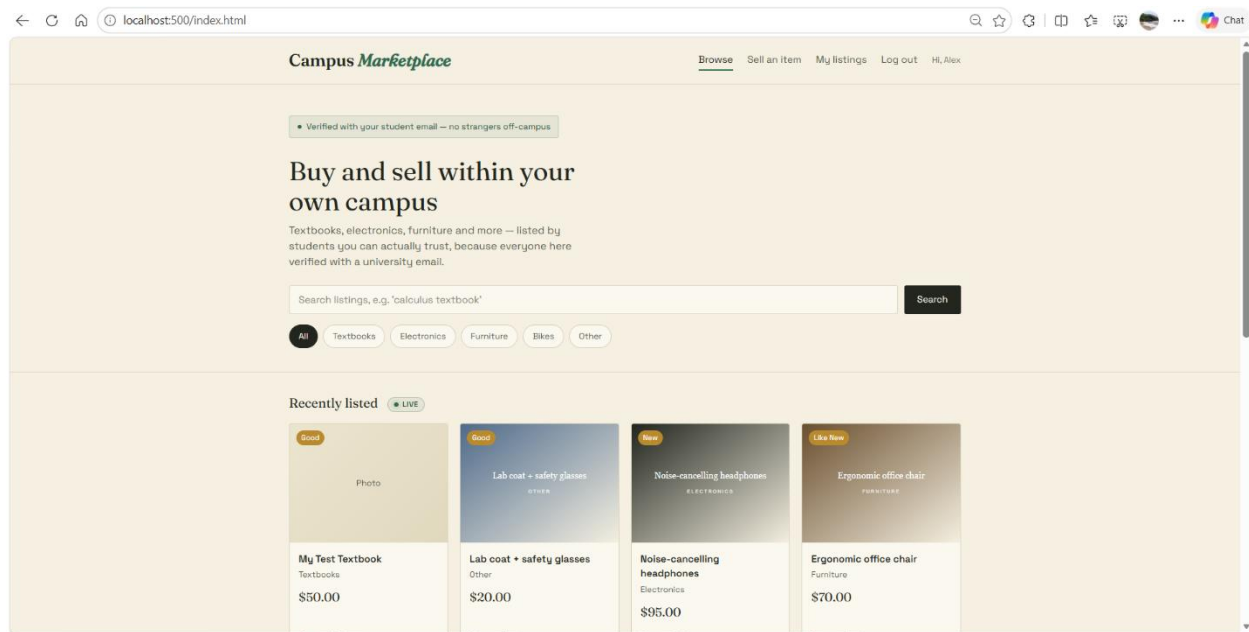

Figure 1: Frontend UI successfully updating the navigation bar to reflect an authenticated session ("Hi, Alex") after receiving the JWT token from the backend.

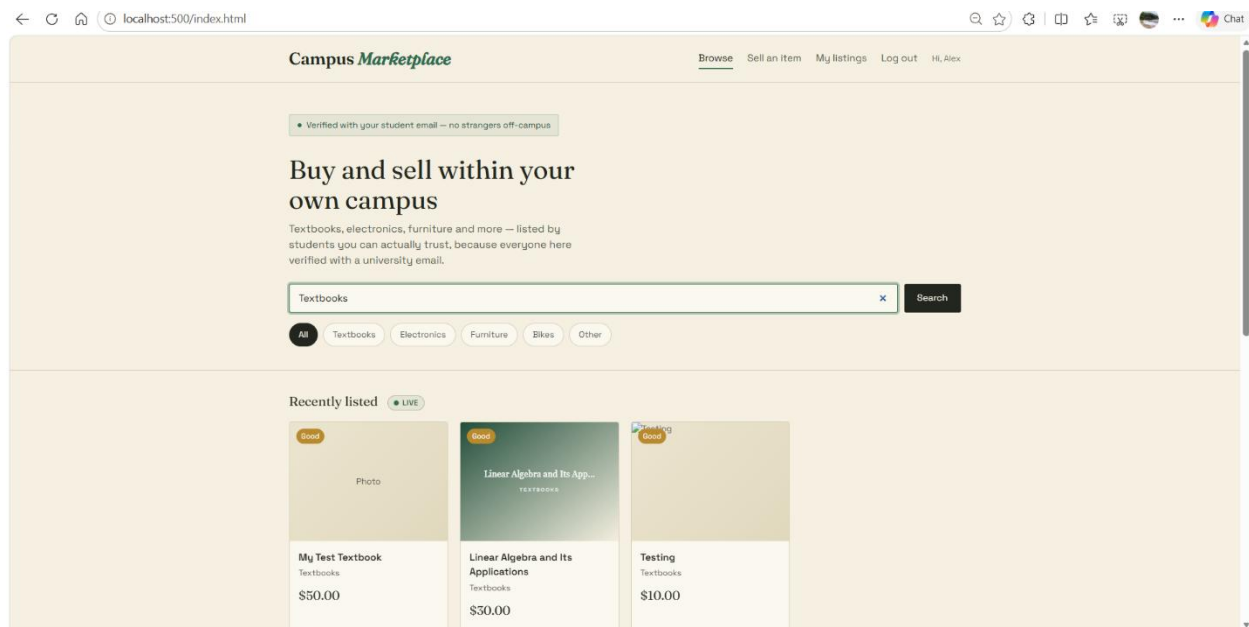

Figure 2: Integration of FR-06, showing the frontend search bar querying the backend and dynamically updating the DOM to display only matching "Textbooks" listings.

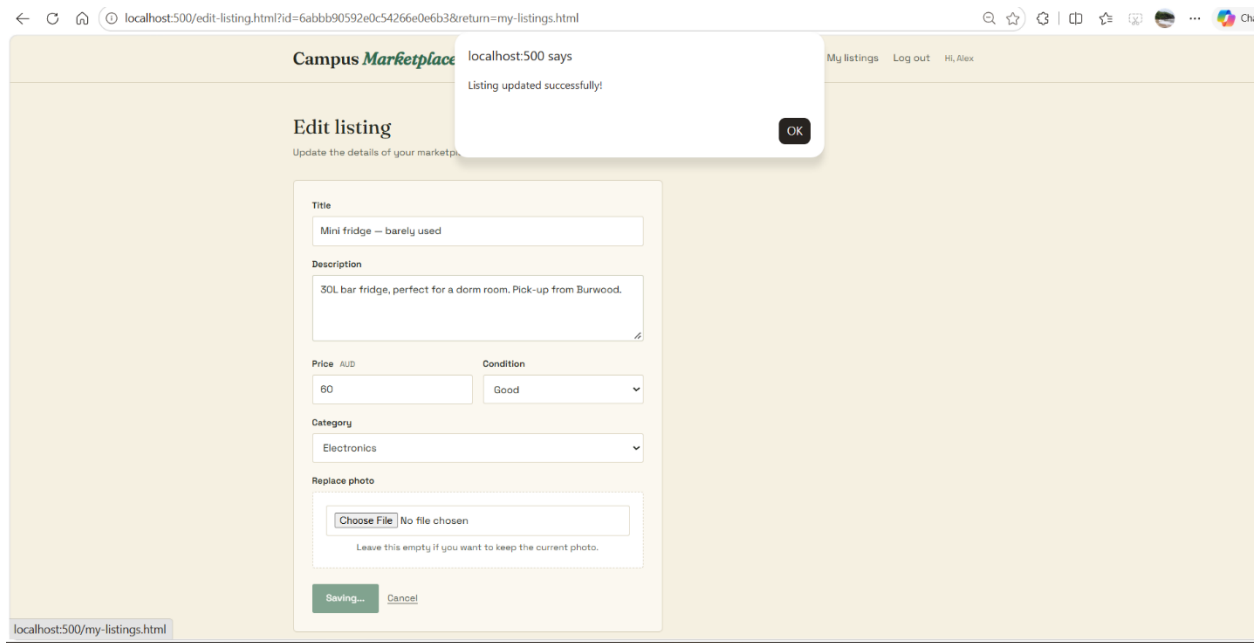

Figure 3: Integration of FR-09, demonstrating the frontend successfully sending a PUT request and displaying the "Listing updated successfully!" confirmation dialog.

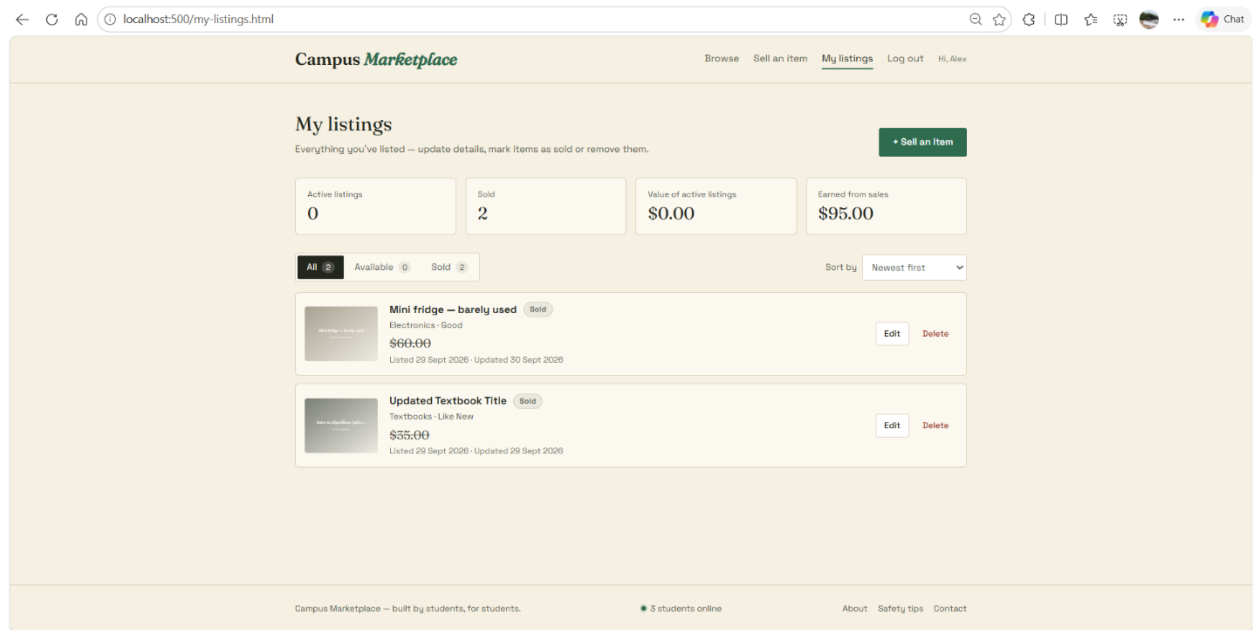

Figure 4: Integration of FR-13, showing the "My listings" dashboard accurately rendering "Sold" status badges retrieved from the database. Note the active Socket.IO connection displaying "3 students online" in the footer.

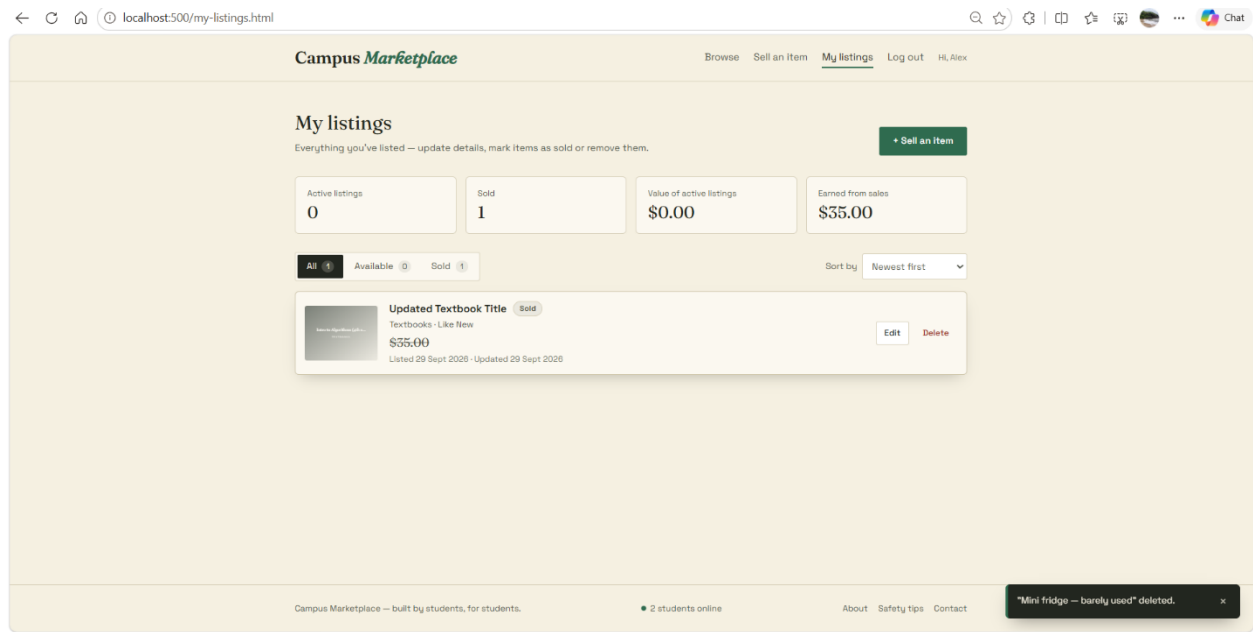

Figure 5: Integration of FR-10, capturing the successful UI toast notification after a DELETE request removes an item from the database and the DOM.

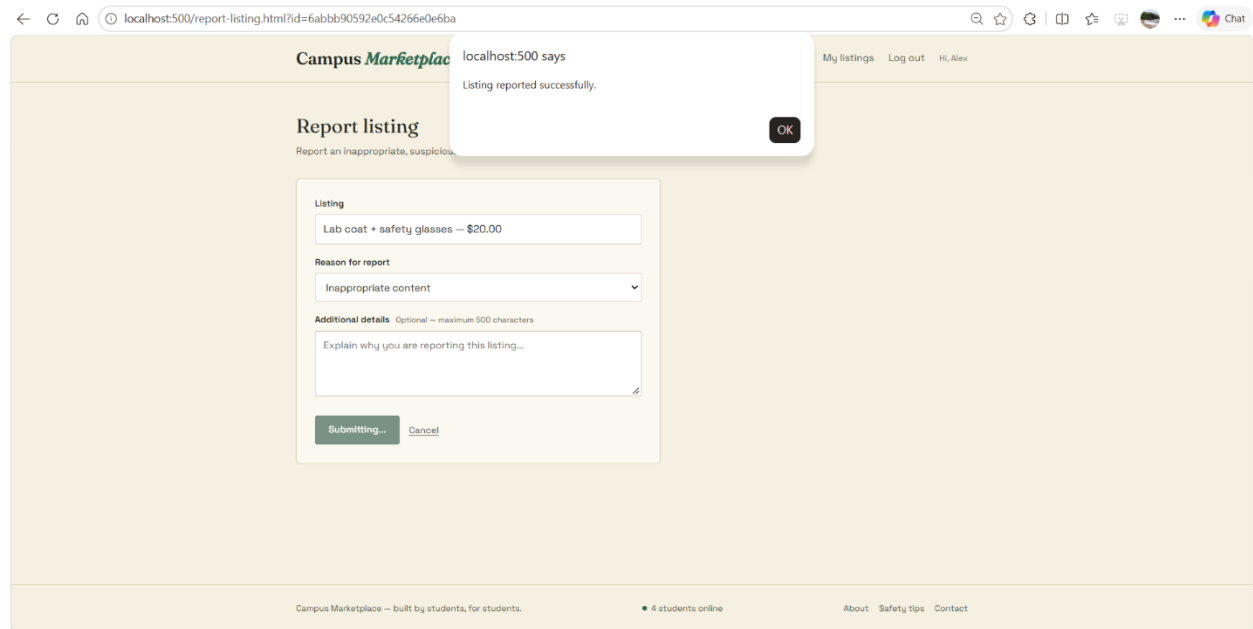

Figure 6: Integration of FR-14, proving the report form successfully POSTs data to the backend and renders a success confirmation modal.

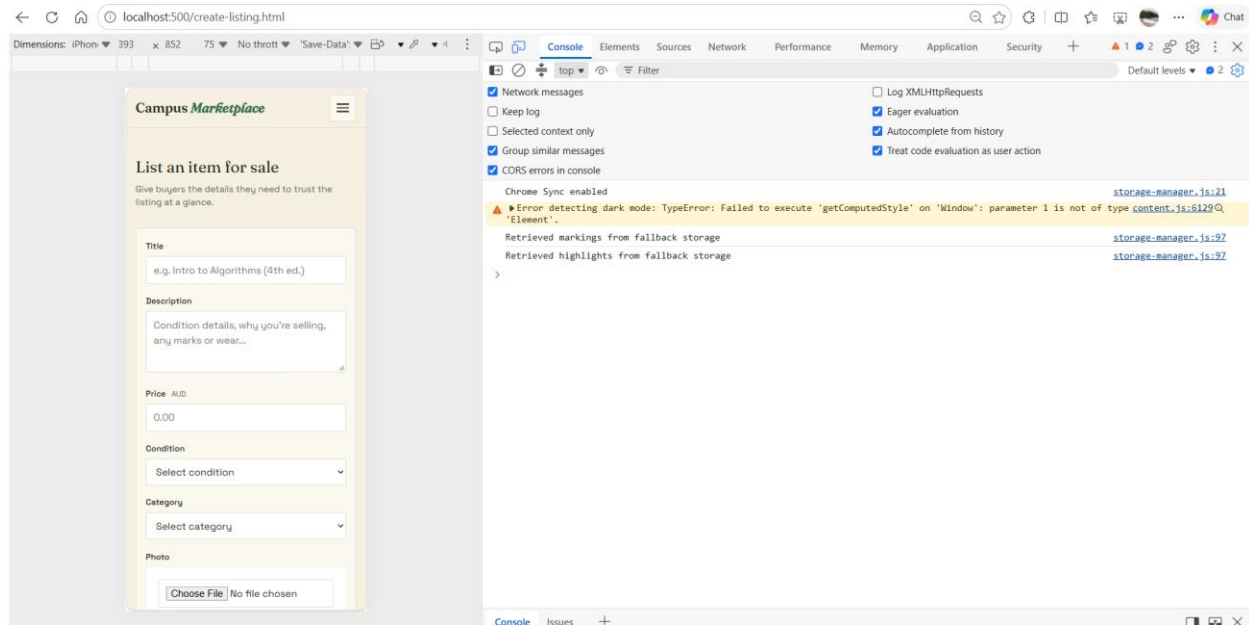

Figure 7: Verification of non-functional requirements (usability/compatibility), showing the web application correctly adapting its layout for mobile device dimensions using browser developer tools.
